

#### ABSTRACT OF THE DISCLOSURE

The present invention provides an absorbent article capable of suppressing rash of skin in regions which come into contact with a gather portion of the absorbent article, by applying a water-soluble skin care agent and oily skin care agent on the gather portion to be contacted with the skin of a wearer in wearing the absorbent article, and allowing at least a part of the above mentioned oily skin care agent to be transferred to the skin of a wearer when wearing before the above mentioned water-soluble skin care agent is transferred to the skin of a wearer.
